

To use this chart:

- 1 Print this page. Use a ruler to confirm the scale at right is accurate.
- 2 With the child standing full weight on a hard surface with heel on the line, estimate the size needed.
- 3 If the length falls between two sizes, select the larger size. (For example, the footprint at right would be a size 4 shoe.)
- 4 Measure both feet and choose the larger of the two sizes.

To confirm size and assess width, we recommend you also print out your estimated individual size page to make a final decision. Our elves can make wide and narrow widths, or larger uppers at no extra charge.

This guide is designed to provide about a ½ inch growing room, so the size that your child measures is the correct size to buy.

Please call or email us with questions on sizing. We look forward to assisting you!
